

## **Table of Contents**

---

	<b>Page</b>
1. Introduction	1
2. Determination of Alkalinity of Water Sample	5
3. Determination of Hardness of Water Sample	10
4. Determination of Free Chlorine in Water Sample	15
5. Preparation of Standard Acidic Buffer Solution	19
6. Preparation of Standard Basic Buffer Solution	22
7. Estimation of Dissolved Oxygen of Water Sample	25
8. Determination of Biochemical Oxygen Demand	28
9. Determination of Chemical Oxygen Demand	31
10. To Estimate the Carbon Monoxide in Exhaust	34
11. To Estimate Dust Particles in Air Sample	36
12. Appendix – I	38
13. Appendix – II	39
14. Appendix – III	41
15. Appendix – IV	43

# INTRODUCTION

## CHEMICAL ANALYSIS

The process of determining the constituents or components of a sample is termed as chemical analysis. There are two board major classes of analysis :

- i. Qualitative analysis
- ii. Quantitative analysis

**Qualitative analysis:** Qualitative analysis involves the detection & identification of the chemical constituents of a given sample.

**Quantitative analysis :** Quantitative analysis is concerned with the methods of determining relative amount of the constituents of a sample.
